Evidence Based Argumentative Essay #2

The world has been surrounded more and more issues each day and one of them is obesity. In the sources B and C, the authors describe cons about obesity in America but overall, is in the whole world and and talks about addiction to junk foods. Obesity has been such a thing back then but over time, more varieties of non-healthy foods have been made, making obesity start to become an epidemic which can affect the world. As statement, junk food should be banned in school cafeterias because of health issues, insanitary addiction of junk food, and financial resource risks.

To start off, Health Issues is a reason for why junk food should be banned at school cafeterias. Kids these days don't realize that junk food can destroy their bodies progressively. According to Source C, an infographic of "Child Obesity," it exclaims, "One third of kids born after 2000 will develop diabetes." It is quite unbelievable for that to be proclaimed because is the beginning of the disease (or the beginning of an end). To know that is astonishing because fifty years from now until then, the world might be having a gargantuan outbreak. Another point according to Source C, exclaims, "Today's children will be the first generation since the Great Depression projected to have a shorter lifespan than their parents." One reason why this is so is because in the past, junk food wasn't as popular as it is in the presence now. The other reason is simply because people ate healthier. Everything was cropped naturally without any chemical additions compared as unto now. Therefore, to clarify that this reason

why Health Issues is a veridical fact, this is a reason to show that junk food should be banned from school cafeterias.

To sequence, Unsanitary Addiction is another reason why junk food should be abolished at school cafeterias. It is no doubt that junk food is what truly makes people gain weight. I might not be instantaneously but progressively. Therefore, in source B, written by Erica Robinson, is expresses, “He told Mental Floss that some foods are purposely made with bland ingredients so that you crave more food or you just add enough sugar or salt unto your mouth explodes with flavor.” Retrieving to the anterior paragraph, as it was told, junk food wasn’t that popular before but what have had made it been become popular were those bland ingredients which make people savour food more and more. Also once studied, scientists acknowledged that Doritos was using these ingredients to make people eat continuously and want more. Another fact, now on source C, is states, “In 2011 Americans spent \$168,000,000 on fast food. . . That’s the same amount of money we spent in obesity-related medical expenses OR nearly enough money to end world hunger!” First of all, that is a humongous amount of money but second of all, all that money spent on something unnecessary could’ve been used as for what it said on the article by supposing medical expenses or coverage for world hunger. But sponsoring of ads, commercials, billboards or anything that has to do with advertising (food) hypnotizes people into wanting that food such as by making the person have appetite. As been told, there is no doubt that Unsanitary Addiction is a reason for why junk food should cease to exist at school cafeterias.

As terminating reason, Financial Resources Risks is a fact for why junk food should put an end to at school cafeterias. Money might not seem to be involved with this situation but it is credible to be involved. According to source C, it says, “By 2018, the US will spend \$344,000,000,000 on obesity-related, health care costs. . . The cost of 13,835,959.4 years of

college education OR The cost of 4,047,058,820 tickets to Disney World.” With all that money to cover health, it really shows a tremendous impact in finances. The coverage of that deals with billions of dollars which are not only the purpose for health but for many other essential-related things. To add on to that, according to source C, the author states, “Children treated for obesity are 300% more expensive for health care system than kids of a healthy weight.” That is an incredible amount of financial issues. If you take those \$344,000,000,000 and multiply them by 0.33333 or $\frac{1}{3}$, if obesity was at its minimum, health care costs would only be around \$114,666,666,667. That might still seem like a lot of money but as a matter of fact, we would be saving $\frac{2}{3}$ of the actual money that will be spent by 2018 if obesity decreases its invasion. To sum it all up, financial resource risks prove enough clear evidence for why junk food should be banned at cafeterias.

The consequences of banning junk food is that people just have to wait by buying their junk food after school or before school. Yet, if people decide to bring junk food before school, there should be inspections whether people have that kind of food or not. And if after school, there should be assemblies or events in order for kids to eat healthier. Such example is if schools give out healthier lunch. This is agreeable because people are capable of doing such things but others find their ways in order for those people to be done such things too.
